Since the 70s, OECD countries have struggle **to support national companies to protect their inventions and industrial secrets** to take the full benefit of this exclusive revenue. So was born the **Patent Box** (that taxes its name from the “box” to tick on the application form), a tax incentive settled to boost patent by leveraging the revenue generated.

After uncountable attempts, questionable in their efficiency, those schemes have found a new breath by extending the scope to other components of industrial property, including software licensing, becoming therefore the **IP box, for Intellectual Property Box**.

If France has been quite late in operating this switch from Patent to IP Box, it is now **done since 2019**, with a wide scheme ranging from pure patents to software revenue through Plant Variety Certificates. And if the application process remains complex, it is however highly efficient for leveraging revenues out of digital.

AGENDA

- History and overview of IP Box schemes
- Principles of IP Box (revenue and nexus ratio)
- Main models and Heatmap of Global Schemes
- Focus on France, Belgium, Italy, Poland & Québec
- Q&A
